

# Compostable

AL-PACK introduced our compostable bags in 2004 to meet the requirements of municipal waste sorting programs. The bags are certified to decompose at the same rate as organics in a commercial compost facility.

Due to the success of our bags, we have expanded our product line to include various food service items made with renewable resources. These products can all be disposed of in conventional waste management methods, but to get the maximum benefits for you and the environment the disposal in a commercial composting facility is best.
